Lab 1: C Programming Refresher

UCR EE/CS 120B

Introduction

Welcome to CS/EE 120B! This laboratory exercise is designed to ease you into the course material and get everyone on the same footing in regards to their C programming experience. After this lab, we will assume for the rest of the quarter that you are proficient in C.

Exercises

Complete all Participation and Challenge activities in Chapter 6 of the zyBook. The title of Chapter 6 is Laboratory Exercise #1 Material.

Note

This C programming refresher is particularly important for transfer students who took an introductory sequence of programming courses in a language other than C/C++. Basic proficiency in C/C++ is expected for all students who take CS 120B. If you are a transfer student and you find this assignment to be particularly challenging, it may be a good idea to withdraw from CS 120B and enroll in CS 012 or CS 014 in order to better develop your programming skills before taking additional upper division courses at UCR.

Submission

Grading will be handled through zyBooks. Exercises must be completed by 11:59pm on the first Sunday following the laboratory session where this exercise was assigned.

No laboratory submission (via iLearn) is required.
